

Client:

Royal Free Hospital, South Hampstead, London.

Sector:

The Royal Free Hampstead NHS Trust, operational hub of a network of care which operates across North London and Hertfordshire.

Value:

£1.4 million

The Brief:

A range of mechanical and electric installations as part of a £1.4million refurbishment of three floors of this large NHS hospital.

Case Studies

Royal Free Hospital, South Hampstead, London.

The Process:

The project benefited from McGoff & Vickers' considerable expertise and experience of working within the healthcare sector. The mechanical (ductwork, pipework, controls and medical gas system) and electrical (including power, lighting, fire alarms and nurse call) installation was delivered working to the consultant's specifications and drawings. This was done in close conjunction with the principal contractor to co-ordinate the complete building services installation.

Result:

As healthcare is a specialised field, it was important that our time served, on-site staff possessed the required experience to install Mechanical and Electrical services to a high standard. The management team, in close supervision and cooperation with the design team, delivered a highly successful conclusion to the project on handover.

Customer Satisfaction:

"McGoff & Vickers fulfilled our brief in an efficient manner and we were very pleased with their work and the on site labour they provided."
